Durg, Chhattisgarh, India · Open to relocation & client-site travel

PROFILE

Cloud and AI systems engineer who builds production full-stack software and embeds LLMs inside it — retrieval-augmented assistants and autonomous agent workflows on the OpenAI API and LangChain, backed by Python, Node.js, Java and Kotlin services, AWS infrastructure and CI/CD. Four years of delivering directly for stakeholders: ERP and logistics integrations, KPI pipelines on Snowflake and Databricks, and Angular and React front-ends used daily across three business units. PMP certified, so scope, delivery and client conversations come as naturally as the code.

40%	99.9%	25+ / 8
less manual operational processing after AI automation	uptime across five mission-critical dashboards on AWS	client projects delivered on time across eight countries

PROFESSIONAL EXPERIENCE

Systems & Operations Engineer

SEP 2025 – SEP 2026

Tunnels & Formworks International S.R.L. (TFI) · Italy, remote from Mumbai, India

- Managed ERP logistics systems and data workflows, maintaining supply-chain visibility across $20M+ international infrastructure projects within a live field-engineering environment.
- Automated reporting pipelines on Snowflake and Databricks for cross-border stakeholders in Italy, India and Australia, replacing hand-assembled project documentation.
- Coordinated the Sydney Metro formwork export programme: five packages delivered across an India-to-Australia supply chain with 15+ non-conformances resolved and zero production stoppages.

Lead Cloud & AI Systems Architect

MAY 2024 – AUG 2025

Code Canvas · Bengaluru, India (On-site)

- Designed and shipped autonomous LLM workflow systems (OpenAI API, LangChain) with retrieval over internal ERP and logistics documents, cutting manual operational processing time by 40% and tightening coordination across three departments.
- Built the full stack around them: REST APIs in Flask and FastAPI plus Node.js, Python, PHP, Java and Kotlin services, with Angular front-ends giving 10+ stakeholders real-time supply-chain visibility and KPI tracking.
- Ran AWS infrastructure and CI/CD pipelines, sustaining 99.9% uptime across five mission-critical dashboards.
- Tuned SQL and built Snowflake and Databricks pipelines, reducing average query response time by roughly 35%.

Web & Application Developer — Freelance

JUN 2022 – MAR 2024

Upwork & Fiverr · Remote

- Delivered 25+ responsive web applications and Discord and Telegram bots in Python, React.js, Next.js, Angular, Java, Kotlin, Go and Rust for clients in eight countries, owning scope from requirements through deployment.
- Maintained a 100% on-time delivery rate across every engagement.

Anuj Nair

FULL-STACK & AI PLATFORM ENGINEER

SELECTED PROJECTS

Sydney Metro Formwork Export Coordination

TFI International

- Delivered five formwork packages with AI workflows automating vendor oversight, chain-of-custody tracking and logistics reporting across an India-to-Australia supply chain.
- Enforced Eurocode and ISO standards through algorithmic vendor qualification and AI-parsed QA/QC checkpoints: 15+ non-conformances resolved, zero production stoppages.

Autonomous AI Workflow Platform

Code Canvas

- End-to-end automation system on multi-model LLM pipelines with retrieval grounded in ERP and logistics data, wired into the tools teams already used.

Python · Flask · FastAPI · LangChain · OpenAI API · Node.js · AWS · SQL · Snowflake · Databricks · CI/CD

Unified ERP / MES / AI Manufacturing Platform

Independent architecture project

- Built a platform joining a design analyzer, a live shop-floor production planner and a logistics optimizer with ML-driven 3D bin-packing for container load planning.
- Diagnosed a production-halting flaw where bin-packing spiked shared CPU to 100% and froze the database mid-QA; re-architected into decoupled FastAPI and Flask services with an async message queue, isolating real-time MES operations and moving AI compute to dedicated workers.

Python · Node.js · FastAPI · Flask · LangChain · Microservices · Message brokers · Databricks · MES/ERP

Aptimizer X — AI Civil Engineering Operating System

Independent project

- Grew an apartment layout planner into a site-to-city-scale platform covering site analysis, GIS, regulatory compliance (FAR/FSI, NBC/IS), quantity estimation and cost engineering.
- Designed a multi-agent architecture — planner, structural, MEP, cost-engineer and report-writer agents — for end-to-end feasibility analysis, with compliance answers retrieved from the code documents themselves.
- Computed buildable area from OpenStreetMap and Leaflet, refining tower placement with a genetic algorithm; documented across 25 modules and a five-stage roadmap.

TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

Python, Java, Kotlin, Go, Rust, JavaScript, PHP, SQL, Node.js, React.js, Next.js, Angular

AI & BACKEND

LLM integration (OpenAI API, LangChain), RAG and retrieval pipelines, agent workflow design, Flask, FastAPI, REST API design, SQL optimisation, CV (CNNs)

CLOUD & INFRASTRUCTURE

AWS, Azure (working knowledge), Snowflake, Databricks, CI/CD, infrastructure automation, DevOps practice, reliability engineering

SYSTEMS & DELIVERY

ERP integration (SAP/Oracle), logistics platforms, KPI dashboards, Git, Agile/Scrum

EDUCATION

Engineering Polytechnic — Computer Science & Engineering

Hindusthan Group of Institutions, Coimbatore

SEP 2021 – OCT 2024

CERTIFICATIONS

- PMP — Project Management Professional
- PRINCE2
- Six Sigma White Belt

LANGUAGES
